## Rivers Of Africa

2 x 60'

EPISODIC BREAKDOWN

### 1. Rivers of Danger

The rivers of Africa bring life, but they can also be the arena for some of nature's greatest challenges. Harsh seasonal cycles dictate the course of life and death along the rivers. Only the fittest survive the crocodile-infested Mara, the extreme drought of the Luangwa Valley or any of the many other perils harboured by rivers all over the continent.

### 2. Rivers of Giants

Africa is a land of giants. Its powerful rivers sculpt the earth and form impressive valleys and waterways that are home to many imposing and powerful inhabitants. These are the rivers where massive elephants and hippos live, feed and drink, and where ancient crocodiles hunt and breed. They share the rivers with porcupines, the martial eagle, and the leopard.
