Incredible Flying Cars

2 x 60'

EPISODIC BREAKDOWN

1. Just Add Wings

The technical challenges of getting a car into the air are huge, but progress is being made. NASA engineers are developing an GPS flying program to manage aerial traffic, while the EU is investing \$6.2 million to develop the myCopter, the next step in personal air transport. It seems the dream is about to take off.

2. Vertical Takeoff

For decades people have been hoping for a personal air vehicle that lifts off and whizzes them to their office, shop or holiday resort. Personal air vehicles are already in demand for weekend enthusiasts, as well as police departments, search and rescue crews and farmers. Two major aerospace companies are in a race to make a vertical take-off vehicle for the military. Could these be the designs for personal flying cars of the future?
