

Galapagos: Hope For The Future

1x90'/2x60'/1x60' (cut down of 90' version)

EPISODIC BREAKDOWN

1. Conversation In Practice (60" Cutdown)

Conservation in Practice is a beautiful portrait of the Galapagos Islands and its unique nature. The film boasts striking images of unspoiled landscapes and extraordinary species, such as the Galapagos penguins, hammerhead sharks, Blue Footed Boobies and the largest tortoises in the world. The Galapagos – world famous for inspiring the groundbreaking theories of Charles Darwin – is, like the rest of the world, threatened by climate change. The film highlights another side of the Galapagos, one where humans better understand and respect the significance of the animals and environment. It tells the hopeful story of passionate researchers who are committed to protect and conserve this special, but fragile, ecosystem. Conservation in Practice takes you on an inspiring journey towards a sustainable future.

1. Hope For The Future (Feature Length)

Galapagos: Hope for the Future is a beautiful portrait of the Ecuadorian archipelago and its unique nature. The film boasts striking images of unspoiled nature and extraordinary species, such as the Galapagos penguins, hammerhead sharks, blue footed boobies and the largest tortoises in the world. The Galapagos is, like the rest of the world, threatened by climate change. The film highlights another side of the Galapagos, one where humans better understand and respect the significance of the animals and environment. It tells the hopeful story of passionate researchers who are committed to protect and conserve this special, but fragile, ecosystem. Galapagos - Hope for the Future takes you on an inspiring journey towards a sustainable future.

1. The New Beginning (60" Blue Chip)

In the far Pacific, there is a world like no other. A land full of strange creatures, many found nowhere else on earth. With bountiful seas, pristine wilderness and a turbulent past. A group of islands with their unique flora and fauna, which naturalist Charles Darwin claimed to be the inspiration of all his views and which have come to shape our whole understanding of life on earth. Where creatures live, whose lives have been profoundly influenced by the ocean and the volcanic soils beneath their feet. The New Beginning boasts striking images of the unspoiled nature and extraordinary animals of the Galapagos islands, such as the piratical frigate birds, awe striking hammerhead sharks, charismatic blue footed boobies and the iconic largest tortoises of the world. The treasure of natural diversity offers some of the world's greatest natural areas, which contain curious flora and fauna, waiting to be explored.

2. The Hidden Paradise (60" Blue Chip)

The Hidden Paradise is the story of Galapagos and the many challenges of continuing the circle of life in this wild and rugged outpost. Where animals live, whose lives have been profoundly influenced by the ocean and the volcanic soils beneath their feet. With stunning sequences, it shows the struggles and victories of the animals born, nurtured and protected on these glorious and special islands.
